

PROFILE FOR

Boise City-Nampa, ID MSA

Why Exports Matter to the Country, And Why Metros Matter to Exports

Even before the devastation wrought by the Great Recession, the U.S. economy was struggling against substantial structural weakness. Despite periods of rising prosperity, the last three decades have been characterized by middle- and lower-income wage stagnation; a lack of job opportunities for those without college degrees; and a speculative bubble-inducing trade deficit. A significant increase in U.S. exports could dramatically improve each of these conditions. Because metro areas are where over 83 percent of U.S. exports are produced, strategies to enhance their unique concentrations of industry clusters and specific competitive advantages would greatly strengthen national export performance.

Boise City's Unique Export Profile

Boise City produces \$2.8 billion in total exports. As a share of its total economy, 12.9 percent of what it produces was exported in 2008, supporting 30,549 jobs. Recent export growth in Boise City has been below average, expanding at 6.6 percent. Average wages in its largest export industry were \$67,502, much higher than U.S. average. The metro has 8 export industry clusters. Finally, its major export industries are Computer and Electronic Product Manufacturing, Agriculture, Royalties from Intellectual Property, Food Manufacturing, and Business, Professional, and Technical Services.

Source: Brookings analysis of Moody's Economy.com, the Institute of International Education (IIE), the Internal Revenue Service (IRS), the United States Bureau of Economic Analysis (BEA), the United States Bureau of Labor Statistics (BLS), Quarterly Census of Employment and Wage (QCEW) and Integrated Public Use Microdata Series (IPUMS) (for metro industry wages), and the United States International Trade Commission (USITC) data. GMP refers to Gross Metropolitan Product. 1. A rank of 1 signifies the highest value among the 100 largest metropolitan areas. 2. The export values for the United States refer to U.S. domestic private exports, excluding scrap materials and used merchandise. 3. Data for individual metros refer to the leading exporting industry by value; data for the largest 100 metros refer to the average large metro's wage in its leading export-industry (using QCEW and IPUMS); *data for the US refer to all industries as reported by the QCEW. 4. An export industry is defined as clustered in a metropolitan area if its export value is at least 50 percent larger as a share of the metro economy than the industry's exports are relative to the U.S. economy.

Boise City's Export Markets For 2008
